Education

Chulalongkorn University, B.Eng. in Electrical Engineering – Bangkok, Thailand

Aug 2022 – May 2026

- GPAX: 3.44 (Second-class honours)
- Coursework: Data Science, Data Engineering, Estimation, Statistical Learning, Optimization
- Capstone: Generative Video-Based Sky Image Forecasting for Thai Sky Images

Skills

Languages: Python, SQL, Bash

Analytics: Pandas, Scikit-learn, NumPy, Spark

Modeling: EDA, feature engineering, validation, statistical modeling, SHAP

Platforms: Docker, FastAPI, Grafana, Git

Experience

AI Engineer Intern, Hobbit Technologies – Bangkok, Thailand

June 2025 – Aug 2025

- Built an internal annotation platform that reduced labeling cost by around 20k Baht and improved dataset iteration speed.
- Added logging and monitoring pipelines with daily reports to track workflow health and data reliability.

Electrical Engineering Intern, AGC Flat Glass – Bangkok, Thailand

June 2024 – Aug 2024

- Analyzed production data and translated findings into PLC control logic, improving operational efficiency by ~10%.

Projects

On-Demand Delivery Data Platform & Decision Intelligence System

- Performed exploratory analysis on delivery events to identify SLA risk patterns and guide predictive feature design.
- Engineered cyclical time encodings and rolling zone-load metrics, then validated models with ROC-AUC and PR-AUC.
- Used interpretable classification outputs and feature importance signals to connect model performance with on-time delivery and SLA compliance.

End-To-End Football Player Value Forecasting & Similarity Recommendation System

- Developed time-series regression and clustering pipelines to forecast player market value and group players by style similarity.
- Turned prediction error and cluster structure into valuation, benchmarking, and recruitment insights.

Football Analytics Content Platform

- Built a data analytics pipeline on match, player, and event-level data to standardize metrics for tactical analysis.
- Conducted EDA and statistical analysis to produce insights for non-technical football audiences.

Competitions

I-squared Hackathon - Motorbike Rider Anomaly Detection & Classification

- Built a two-stage computer vision pipeline with YOLOv8 for detection and ViT for classification.
- Designed automated data-cleaning and enhancement pipelines; reached semifinals with >90% accuracy on training data and >70% on unseen real-world images.
