Education

Chulalongkorn University, B.Eng. in Electrical Engineering – Bangkok, Thailand Aug 2022 – May 2026

- GPAX: 3.44 (Second-class honours)
- Coursework: Data Science, Data Engineering, Estimation, Statistical Learning, Optimization
- Capstone: Generative Video-Based Sky Image Forecasting for Thai Sky Images

Skills

Languages: Python, SQL, Bash

Data Platform: PostgreSQL, Airflow, dbt, Docker

Reliability & Ops: ETL/ELT, schema validation, monitoring, Grafana, Git

Analytics: Pandas, Spark, Scikit-learn, FastAPI

Experience

AI Engineer Part Time, Hobbit Technologies – Bangkok, Thailand Feb 2026 – present

- Engineered a production-ready generation pipeline with LiteLLM, FastAPI, and PostgreSQL, replacing free-form outputs with Pydantic-validated schemas for reliable downstream processing.
- Built a modular Next.js 15, FastAPI, and PostgreSQL stack that uses spaCy and Oxford 5000-derived data to generate structured linguistic signals for AI features.

AI Engineer Intern, Hobbit Technologies – Bangkok, Thailand June 2025 – Aug 2025

- Built an internal annotation platform, reducing labeling cost by around 20k Baht and accelerating YOLO model iteration.
- Implemented logging and monitoring pipelines with daily reports, improving reliability and observability in ML workflows.

Electrical Engineering Intern, AGC Flat Glass – Bangkok, Thailand June 2024 – Aug 2024

- Analyzed production data and translated insights into PLC control logic, improving operational efficiency by ~10%.

Projects

On-Demand Delivery Data Platform & Decision Intelligence System

- Engineered ETL/ELT pipelines in Python, PostgreSQL, Airflow, dbt, and Docker to ingest raw JSON events into a structured feature store.
- Added automated schema validation and data-quality checks to support production-ready ingestion, orchestration, and scalability.
- Delivered delay-prediction workflows with time-aware training and scheduled refreshes to keep downstream consumers reliable.

Football Analytics Content Platform

- Built a reusable data pipeline on match, player, and event-level data to standardize metrics and automate analyst workflows.
- Created SQL and Pandas transformations that reduced manual preprocessing for recurring reporting and tactical analysis.

End-To-End Football Player Value Forecasting & Similarity Recommendation System

- Developed time-series regression and clustering pipelines to forecast player value and group players by role similarity.
- Converted model outputs into operational insights for recruitment benchmarking and risk-aware shortlisting.
