Education

Chulalongkorn University, B.Eng. in Electrical Engineering – Bangkok, Thailand Aug 2022 – May 2026

- GPAX: 3.48 / 4.00; Second-class honours.
- Relevant coursework: Data Science, Data Engineering, Estimation, Statistical Learning, Optimization.
- Capstone: Generative Video-Based Sky Image Forecasting for Thai sky images using VQ-VAE-based video prediction.

Skills

Languages: Python, SQL, JavaScript, Bash

ML / AI: PyTorch, AutoGluon, MLForecast, Hugging Face, Scikit-learn, OpenCV, spaCy

Backend / Data: FastAPI, Next.js, React, PostgreSQL, SQLAlchemy, Pandas, PySpark, Airflow, dbt, Seaborn

MLOps / Tools: Docker, Git, Grafana, Prometheus, GCP, Vercel, Selenium

Experience

Data Scientist Intern, AXONS – Bangkok, Thailand June 2026 – present

- Developing a transport demand forecasting pipelines for logistics planning from user requirements.
- Performed data scoping, feature engineering, and EDA on datasets to identify reliable forecasting signals and business insights.
- Evaluating statistical baselines, challengers models, and domain-informed covariates to select models suitable for demand forecasting pilots.

AI Engineer, Part-time, Hobbit Technologies – Bangkok, Thailand Feb 2026 – present

- Develop and maintain RAG services with LiteLLM and FastAPI, using Pydantic-validated structured outputs to reduce downstream parsing failures.
- Architect a modular Next.js/PostgreSQL platform for CEFR-aligned content generation and evaluation, including automated grammar-correction workflows.
- Improve LLM output consistency through prompt templates, schema validation, and REST API service boundaries.

AI Engineer Intern, Hobbit Technologies – Bangkok, Thailand June 2025 – Aug 2025

- Engineered a Dockerized computer-vision data engine with OpenCV, automated drift checks, and active-learning triggers, reducing labeling cost by approximately 20k THB/year.
- Deployed Grafana/Prometheus monitoring for Edge AI inference on on-premise IoT sensors, improving visibility into production-line failures.
- Built data-cleaning and dataset-versioning workflows for edge computer-vision experiments.

Electrical Engineering Intern, AGC Flat Glass – Bangkok, Thailand June 2024 – Aug 2024

- Built a data-driven control-logic prototype that integrated production data into PLC workflows.
- Analyzed machine and production signals to support operational-efficiency improvement of approximately 10%.

Projects

Generative Video-Based Sky Image Forecasting for Thai Sky Images Aug 2025 – May 2026

- Implemented and optimized a VQ-VAE-based forecasting model with Charbonnier loss, perceptual loss, EMA codebook updates, and sub-pixel interpolation decoding.
- Achieved 37.32 dB peak validation PSNR, a 16% improvement over baseline, while compressing channel-sequence representations for more stable temporal prediction.

Coffee Chain Demand Forecasting System June 2025 – June 2025

- Engineered horizon-safe lag, rolling, event-proximity, calendar, and store-category demand features for daily product-level sales forecasting across representative coffee stores.
- Reduced internal walk-forward CV MAE by 12.2% over the leakage-safe baseline and identified local-event and store-category behavior as the strongest business signals.

On-Demand Delivery Data Platform & Decision Intelligence System Dec 2024 – Feb 2025

- Built ETL/ELT workflows with Python, PostgreSQL, Airflow, dbt, and Docker to ingest raw JSON events into analytics-ready tables and feature-store structures.
- Added schema validation and time-aware model validation to support ETA and delay-prediction experiments.

Football Player Value Forecasting & Similarity Recommendation System	Oct 2025 – Mar 2026
- Developed time-series regression and clustering pipelines to forecast player market value and group players by role similarity. - Translated forecasting errors and cluster structures into recruitment and benchmarking insights.	

Competitions

Microsoft AI Engineering Skills and Hackathon for Employment 2026 (Finalist)	2026
- Secured a finalist team spot out of a competitive pool of 2,000+ regional participants. - Architected a dashboard-driven emergency intake and case-evaluation pipeline leveraging Azure AI Foundry and Azure OpenAI models.	
Thailand Super AI Engineer Season 6 — Edge AI for Intelligent Transport Systems (Winner)	2026
- Developed a computer-vision data pipeline for traffic monitoring and anomaly detection. - Used VLM-assisted inspection and semi-supervised learning techniques to bootstrap custom traffic datasets.	
Thailand Super AI Engineer Season 6 — Enterprise Data Agentic Showdown (First runner-up)	2026
- Architected an evaluation and testing harness for agentic AI tools optimized for OCR data extraction. - Led the computer vision team in integrating robust tool pipelines and guardrails for reliable document processing.	
Thailand Super AI Engineer Season 6 — Coffee Chain Time-Series Hackathon	2026
- Led research and feature engineering for daily coffee-sales forecasting; designed seasonal and event-driven demand features. - Contributed technical evidence for the pitching track by connecting forecasting features to inventory and order-optimization workflows.	
Thailand Super AI Engineer Season 6 — Computer Vision Hackathon	2026
- Researched and implemented a multi-head ConvNeXt architecture tailored for complex re-identification tasks. - Engineered an automated data-labeling and preprocessing pipeline, reducing manual curation effort for two-stage prediction models.	
I-squared Hackathon — Motorbike Rider Anomaly Detection & Classification (Semi finalist)	2026
- Developed a real-time computer vision pipeline to detect and classify dangerous rider behavior and anomalies. - Optimized model inference latency and accuracy for edge deployment scenarios.
